### **DETAILED ACTION**

1. There are two claims numbered "22". The second claim 22 should be renumbered "23", and claims 23-40 should be renumbered "24"-"41", respectively. The dependent claims should be amended to depend from claims as renumbered in the manner thus set forth.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11 and 27-41 (after renumbering), drawn to calibration of a color reprographic system, classified in class 358, subclass 504.
  - II. Claims 12-22, drawn to image processing based on scanner and printer characteristics, classified in class 358, subclass 448.
  - III. Claims 23-26 (after renumbering), drawn to image processing based on characteristics of image data, classified in class 358, subclass 1.9.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I, II and III are directed to related processes. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed perform distinct and mutually exclusive functions (calibration, image processing based on scanner/printer characteristics, image processing based on characteristics of image data) which are not obvious variants of each other.

Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
